PRECISION EXCAVATION. DEDICATED SERVICE.

GULF COAST HYDRO VAC LLC

Hydro Excavation

Controlled soil removal around existing underground utilities.

CARE AND ATTENTION FOR EVERY EXCAVATION

Expose utilities.
Reduce the risk of damage.

Gulf Coast Hydro Vac delivers dedicated hydro-excavation service using pressurized water and powerful vacuum removal to expose buried utilities, minimize disturbance, and help reduce the risk of underground damage. From small projects to larger jobs, we bring care and attention to every excavation.

PROTECT YOUR CREW. PROTECT YOUR PROJECT.

ONE UTILITY STRIKE.

THOUSANDS IN DAMAGE. A LIFE AT RISK.

Temporary reference: Titan Hydrovac Excavation

Temporary reference: Midwestern Contractors

Striking a buried utility can mean costly repairs, service outages and project delays. A gas or electrical strike can cause serious injury or loss of life.

Know what's below before the damage is done.

Gulf Coast Hydro Vac uses controlled water excavation and vacuum removal to expose buried utilities and help reduce the risk of a strike.

PRECISE DIGGING. LESS DISTURBANCE.

Hydro excavation targets the area that needs to be exposed, often creating a smaller excavation than a conventional excavator. With the truck positioned on suitable nearby access, the vacuum hose reaches the work area—helping avoid excavator tracks or repeated equipment traffic across your lawn.

Less ground disturbed. Less restoration afterward.

LESS GUESSWORK. FEWER COSTLY SETBACKS.

Hydro excavation exposes buried utilities with precision, helping reduce the risk of strikes, unnecessary digging and costly repairs. Around congested utility lines, that can mean less downtime—and savings for your project compared to conventional excavation methods.
